

Verification map — 5 core theories · 3 protocol views + master map · 58 lemmas

where each file's lemmas live, and how the figures fit together

The package also includes a separate idealised N-hop abstraction (multihop_nhop_fees.spthy, 31/31) and the reusable-channel boundary spike (experiments/), documented in REPORT2.md.

Read this map first, then the routing, channel-lifecycle, and timing views.
